

## Why do you need Qwil Messenger?

Client communications are under attack. This is because users are **unauthenticated** and data is **unprotected**.

Workarounds (encrypted emails, portals, calls-back) simply don't work. They not only make it complicated to communicate, but have also led to unofficial workarounds such as WhatsApp be used.

**That's where we come in.** Qwil makes it easy for firms to communicate and meet their security & regulatory requirements.

## The Qwil Advantage

- A totally secure solution to meet banking-grade standards (not just end-to-end encryption).
- Enables hassle-free conversations that are more efficient, convenient and safe for all participants.
- Co-ordinated, private conversations with the right participants at the right time.
- Complete audit trail of all interactions that is fully owned and managed by your business.

## Why can't we just use social apps?

The \$200m JPM fine for allowing WhatsApp use (and other personal channels) has been a wake up call for the industry. Although recording tools for keeping an audit trail or connectors to social platforms exist, **conversations remain insecure**.

- Participants are unverified (clients are still using social chat)
- Not banking-grade security everywhere (2000% increase in WhatsApp scams in the last 12 months)
- Unable to be utilised in a meaningful way (no sensitive information can be shared)

## Product News

We are constantly updating and improving our platform based upon feedback. Our technology can be deployed anywhere within minutes, and can support businesses of all sizes. Below are a number of the key enhancements we continue to offer to our customers.

### Qwil for Enterprise (White-label) - coming in H2 2022

In response to demand from large enterprise customers, we are introducing Qwil for Enterprise. This offering allows an organisation to have their own Qwil app, that they can brand and name accordingly. This will allow customers to own the entire brand experience whilst leveraging the complete communication utilities of Qwil Messenger.

Our white-labelled solution can also enable different business units, brands or geographic regions to be logically segregated and distributed, yet delivered via a single app. This includes being able to meet localised data hosting requirements.

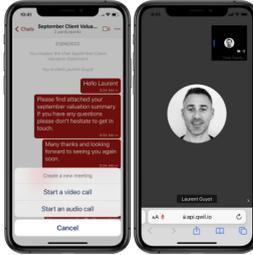

### Video, voice & screen sharing functionality

Users can now instantly go from a chat to video/audio conference with the click of a button. No need to pay for yet another service or download another app whether on mobile or desktop.

Share your screen, send messages and documents in the same conversation all within the secure Qwil environment.

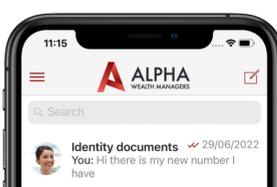

Recording functionality coming soon.

### Search & Review

Search functionality has been enhanced and is now also available on mobile!

Users can see chats and documents directly under their contacts, and the data reviewer has been redesigned with more information available including the last message, as well as additional permissions levels.

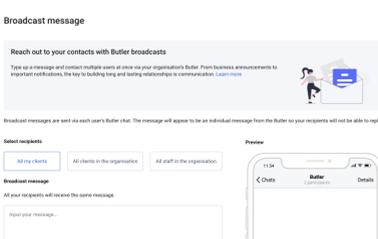

### Message Broadcast

Send a message to all your staff or clients in one go via the Butler directly from Qwil.

Promote special events, newsletters, or any other relevant information knowing it will not get lost in users' inboxes.

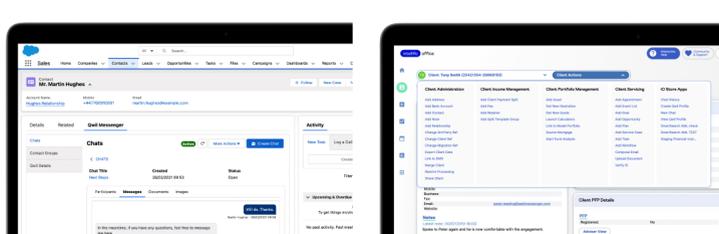

Firms can also leverage our extensive APIs for bespoke notifications and automations.

## Integration with Salesforce and Intelliflo Office

Qwil now supports two out-of-the-box app integrations for both Salesforce and Intelliflo Office. These apps enable seamless integration between your conversations and your client records. Using either of these apps you can:

- Automatically access all chats with a client
- One-click access to create chats
- Manage Qwil client profiles and access

## AWS - Switzerland coming Q3/Q4

Qwil can be deployed in 27 AWS regions but one has been missing! AWS Europe (Zurich) Region is in the works and will open in Q3/Q4 with three Availability Zones. This opens up Qwil Messenger to all wealth managers and firms wishing to have their data hosted in Switzerland!

## Qwil Messenger in the News

**cybernews** Laurent Guyot, the Director and the CFO at Qwil Messenger introduces our readers to modern and secure business communication platforms and explains what are the best practices to avoid data breaches.

**Oracle**

Listen to our podcast with Oracle on how our solution makes it easy for staff to communicate with clients without having to worry about fraudsters!

**PIMFA**

PIMFA welcomes Qwil Messenger as the latest of its PIMFA Plus partners offering PIMFA members a secure instant messaging platform they can use to communicate with their clients.

## Are you still wondering which instant messaging platform to use?

We are more than happy to discuss alternatives - what can (or cannot) be done when connecting to WhatsApp or challenges of in-app solutions. We have comparisons for mos ...if not all! Just ask us.
